The 8th Annual IT Security Automation Conference (ITSAC) is the premier meeting of government and industry leaders shaping the future of security automation and continuous monitoring. ITSAC focuses on the breadth and depth of automation principles and technologies designed to support information technology (IT) security automation requirements across organizations in multiple sectors. This program also provides a special focus on tools that are compliant with security automation standards.

This 3-day event includes tutorials, conference proceedings, workshops, opportunities to network and exchange ideas with your peers in the federal government and private industry sectors, and an exhibit hall that will offer a chance for the vendors of SCAP compliant tools to demonstrate how their technology meets the standards for developers, integrators and end-users.

Topics include: strategies for implementing continuous monitoring; using security automation tools and technologies to ease the technical burdens of policy compliance; and innovative uses of automation across the enterprise in both federal government and industry applications. Security automation leverages standards and specifications to reduce the complexity and time necessary to manage vulnerabilities, measure security, and ensure compliance, freeing resources to focus on other areas of the IT infrastructure.

Conference Tracks

- Continuous Monitoring
- Software Assurance
- Incident Handling & Information Sharing
- Analytics & Mitigations: With Security Mitigation Enablers
- Trusted Computing & Security Automation
- Vendor Product Highlights

Don't wait to buy your passes at the door. If you're planning to attend, we strongly recommend you register now before rates go up.
