### NCHS Guidelines for Ensuring the Quality of Information Disseminated to the Public

- I. [Agency Mission](#)
- II. [Scope and Applicability of Guidelines](#)
- III. [Types of Information Disseminated by the Agency to the Public](#)
- IV. [Types of Dissemination Methods](#)
- V. [Quality Assurance Policies, Standards, and Processes for Ensuring the Quality of Information Disseminated to the Public](#)
- VI. [Agency Administrative Complaint Procedures](#)
- VII. [Influential Scientific, Financial, and Statistical Information](#)

#### I. Agency Mission

The National Center for Health Statistics (NCHS), a component of the Centers for Disease Control and Prevention (CDC), is one of the Federal statistical agencies belonging to the Interagency Council on Statistical Policy (ICSP). The ICSP, which is led by the [Office of Management and Budget \(OMB\)](#), is composed of the heads of the Nation's 10 principal statistical agencies plus the heads of the statistical units of 4 nonstatistical agencies. The ICSP coordinates statistical work across organizations, enabling the exchange of information about organization programs and activities, and provides advice and counsel to OMB on statistical activities. The statistical activities of these agencies are predominantly the collection, compilation, processing or analysis of information for statistical purposes. Within this framework, NCHS functions as the Federal agency responsible for the collection and dissemination of the Nation's vital and health statistics. Its mission is to provide statistical information that will guide actions and policies to improve the health of the American people.

To carry out its mission, [NCHS conducts a wide range of annual, periodic, and longitudinal sample surveys and administers the national vital statistics systems.](#)

As the Nation's principal health statistics agency, NCHS leads the way with accurate, relevant, and timely data. To assure the accuracy, relevance, and timeliness of its statistical products, NCHS assumes responsibility for determining sources of data, measurement methods, methods of data collection and processing while minimizing respondent burden; employing appropriate methods of analysis, and ensuring the public availability of the data and documentation of the methods used to obtain the data. Within the constraints of resource availability, NCHS continually works to improve its data systems to provide information necessary for the formulation of sound public policy. As appropriate, NCHS seeks advice on its statistical program as a whole, including the setting of statistical priorities and on the statistical methodologies it uses. NCHS strives to meet the needs for access to

its data while maintaining appropriate safeguards for the [confidentiality](#) of individual responses.

## II. Scope and Applicability of Guidelines

NCHS will ensure that disseminated information meets the standards of quality set forth in the OMB, HHS, CDC, and NCHS guidelines. It is NCHS' policy to ensure and maximize the quality, objectivity, utility, and integrity of information that it disseminates to the public. We strive to provide information that is accurate, reliable, clear, complete, unbiased, and useful. We are committed to integrating the principle of information quality into every phase of information development, including creation, collection, maintenance, and dissemination.

The guidelines apply only to information disseminated on or after October 1, 2002. The administrative mechanism for correction applies to information that the agency disseminates on or after October 1, 2002, regardless of when the agency first disseminated the information.

The guidelines cover all NCHS statistical and analytic information products originated by the agency, except as specified below:

- Documents not authored by NCHS (either directly or by contract) and not representing official views, including research supported by NCHS funding;
- Archival information disseminated by NCHS;
- Information dissemination limited to government employees or agency contractors or grantees;
- Information intended solely for intra- or interagency use or sharing of government information, such as evaluation of a specific methodological approach to assess success in achieving its objectives;
- Press releases that support the announcement or give public notice of information that NCHS has disseminated elsewhere;
- Information for public filings, subpoenas, or adjudicative processes;
- Opinions where the presentation makes it clear that what is being offered is personal opinion rather than fact or the agency's views.

## III. Types of Information Disseminated by NCHS to the Public

NCHS disseminates a variety of statistical and analytic [information products](#). These include: statistical reports on topics such as births, deaths, life tables, health status, health services utilization and the provision of health care; statistical tabulations; publications in its "Healthy People 2010" series; "Health, United States," the Secretary's annual report to the Congress; and public and restricted use data files. NCHS also disseminates the results of epidemiologic, demographic, and methodological research.

## IV. Types of Dissemination Methods

NCHS statistical and analytic information products are distributed in one or a combination of the following media:

- Print -- publications, reports, books, brochures, and pamphlets.
- Electronic -- the NCHS Web site, CD ROMs, listservs, e-mail, automated voice and fax systems, hotlines and clearinghouses.
- Oral -- speeches, presentations, commentaries for publication or broadcast, etc.
- Audio-Visual -- broadcast scripts, audio or videotapes, and video casting.

## V. Quality Assurance Policies, Standards, and Processes for Ensuring the Quality of Information Disseminated to the Public

NCHS is recognized as one of the major statistical agencies in the Federal Government. In developing its statistical and analytic information products, NCHS recognizes that the quality assurance process begins at the inception of the information development process and routinely employs a number of widely accepted methods and procedures for ensuring quality, including independent assessments of statistical methodologies and observance of professional standards. In order to ensure the utility of its statistical and analytic information products, NCHS conducts independent research and consults with experts in areas such as data collection, data analysis, and a variety of substantive topics and issues. Additionally, NCHS maintains ongoing contact with users, and participates

in conferences, workshops, etc., in order to objectively assess and identify the current and future data needs of NCHS constituents. NCHS reviews the quality (including the objectivity, utility, and integrity) of information before it is disseminated and treats information quality as integral to every step of the development of information, including its creation, collection, maintenance and dissemination. Further, NCHS employs a wide variety of dissemination mechanisms to make its statistical and analytic information products widely available and broadly accessible.

In order to assure the objectivity of its statistical and analytic information products, i.e., that they are accurate, reliable, and unbiased, NCHS obtains these data through accepted statistical theory and practice. Dissemination of data also follows generally recognized guidelines in terms of defining acceptable standards regarding minimum response rates, maximum standard errors, cell size suppression, quality of coding and other processing operations. NCHS also maintains staff expertise in areas such as concept development, survey planning and design (including questionnaire development and testing), data collection, data processing and editing, data analysis, evaluation procedures, and methods of dissemination. Further, NCHS strives to demonstrate in its Paper Reduction Act (PRA) clearance packages that each draft information collection will result in information that will be collected, maintained, and used in a way that is consistent with OMB, HHS, CDC, and NCHS information quality guidelines.

NCHS assures the security of its statistical and analytic information products through the enforcement of rigorous controls that protect against unauthorized access to the data, revision or corruption of the data, or unauthorized use of the data. Some of the major controls used at NCHS include access control, user authentication, encryption, access monitoring, provision of unalterable electronic content, and audit trails.

All NCHS statistical and analytic information products undergo a formal clearance process before dissemination. Publications and reports, whether in electronic or paper form, are reviewed by a designated official within the author's office or division and by the NCHS Associate Director for Science (ADS). These reviews cover the clarity of descriptive text, the appropriateness of the methodology, the soundness of the analysis, the adherence to confidentiality and disclosure avoidance restrictions, the readability of tabular and graphic presentations of data, etc. Finally, all products undergo editorial review (e.g., formatting, proofreading, spell checks, proper punctuation, etc.) In addition, all public-use tapes are reviewed for accuracy and appropriate confidentiality protections. Oral presentations are subject to appropriate supervisory review.

NCHS statistical and analytic information products are derived using generally acceptable statistical practices and methodologies, which are well documented and available to the public. These procedures enable responsible statisticians and analysts outside of NCHS to replicate the NCHS statistical methods and obtain results consistent with those obtained by NCHS.

## **VI. Agency Administrative Complaint Procedures**

### **A. Responsibility of the Complainant**

To seek a correction under Section 515 of Public Law 106-554 of information disseminated by NCHS, individuals should follow the procedures described below:

- A complaint or request for review and correction of information shall be in written hard copy or electronic form;
- It shall be sent to NCHS:
  - by mail, in care of:  
CDC/ATSDR  
Attention: MASO, MS-E11  
1600 Clifton Road, NE  
Atlanta, GA 30333
  - or by electronic-mail (e-mail) at [InfoQuality@cdc.gov](mailto:InfoQuality@cdc.gov)

- It shall state that a request for correction of information is being submitted under Section 515 of Public Law 106-554.

The complaint shall contain:

- A detailed description of the specific material that needs to be corrected, including where the material is located, i.e., the publication title, date, and publication number, if any, or the Web site and Web page address (url), or the speech title, presenter, date and place of delivery;
- The specific reason(s) for believing the information is in error and supporting documentation, if any;
- The specific recommendations for correcting the information;
- A description of how the complainant is affected by the information error; and
- The name, mailing address, telephone number, e-mail address, and organizational affiliation, if any, of the complainant.

Complainants should be aware that they bear the "burden of proof" with respect to the necessity for correction as well as with respect to the type of correction they seek.

### **B. Responsibility of NCHS**

Based on a review of the information provided, NCHS will determine whether a correction is warranted and, if so, what action to take. NCHS will respond to the requester by letter or e-mail. The NCHS response will explain the findings of the review and the actions that it will take, if any. The response will consider the nature and timeliness of the information involved and such factors as the significance of the correction on the use of the information and the magnitude of the correction. The response will describe how the complainant may request reconsideration. NCHS will respond to all requests for correction within 60 days of receipt. If the request requires more than 60 days to resolve, NCHS will inform the complainant that more time is required and indicate the reason(s) why. NCHS will also provide an estimated decision date.

### **C. Appeals**

If the complainant does not agree with the NCHS decision (including the corrective action, if any), the complainant may send a written hard copy or electronic request for reconsideration within 30 days of receipt of the NCHS decision. The appeal shall state the reason(s) why the NCHS response is insufficient or inadequate. Complainants shall attach a copy of their original request and the NCHS response to it, clearly mark the appeal with the words, "Information Quality Appeal," and send the appeal to NCHS:

- by mail, in care of:  
CDC/ATSDR  
Attention: MASO, MS-E11  
1600 Clifton Road, NE  
Atlanta, GA 30333
- or by electronic-mail (e-mail) at [InfoQuality@cdc.gov](mailto:InfoQuality@cdc.gov)

The NCHS official who reviewed the original complaint will not have responsibility for responding to the appeal. The agency will respond to all requests for appeals within 60 days of receipt. If the request requires more than 60 days to resolve, the agency will inform the complainant that more time is required and indicate the reason(s) why and an estimated decision date.

### **VII. Influential Scientific, Financial, and Statistical Information**

NCHS statistical and analytic data information products are used extensively to evaluate and profile the health of the American people. Often, findings from NCHS surveys serve as benchmarks for investigating the need to modify or implement policies that will affect initiatives addressing specific health concerns of the United States population or specific health concerns of certain population subgroups. In recognition of the potential impact some of its statistical and analytic data products may have on health policy and initiatives, NCHS requires that these products meet the highest possible quality standards. In order to accomplish this goal, quality standards are embedded throughout all survey processes and procedures, beginning with the conceptualization and design of a survey, through to data

dissemination. The appropriateness of many of these standards is measured by independent assessments (e.g., peer review) conducted by qualified persons. Further, NCHS strives to assure that its processes and procedures are appropriate, well documented, and capable of being replicated by qualified persons outside of NCHS in order to derive results consistent with those obtained by NCHS. Whenever confidentiality restrictions preclude the general availability of NCHS data sets, methodologies, etc., NCHS makes every effort to provide qualified researchers limited access to confidential files through its Research Data Center, which was established specifically for that purpose.
